

## Secure Digital (SD) Card :: SD Card

The [Secure Digital \(SD\) card](#) is a memory card that is specifically designed to meet the security, capacity, performance, and environment requirements inherent in newly emerging audio and video consumer electronic devices.

This driver supports FAT-formatted SD cards up to 32 GB and fulfills the required interface for integration with the FatFS library.

The software is architected with long-term maintainability, portability across MCU platforms, and adherence to high software quality standards as core design principles.

- ✔ Layered architecture with clear HAL abstraction
- ✔ Conforms to ISO C99 standard
- ✔ Portable across multiple MCU platforms
- ✔ Supports both RTOS and bare-metal environments
- ✔ CMake build system for scalable integration
- ✔ Seamless integration with GCC toolchain
- ✔ Statically analyzed for MISRA, CERT, and CWE compliance

### Initialization Interface

```
sd_result_t sd_init( sd_handle_t*, sd_attr_t )
```

### Data Retrieval Interface

```
sd_result_t sd_get_device_info( sd_handle_t*, ... )
```

```
sd_result_t sd_read_block( sd_handle_t*, ... )
```

```
sd_result_t sd_read_block_multi( sd_handle_t*, ... )
```

### Write Interface

```
sd_result_t sd_write_block( sd_handle_t*, ... )
```

```
sd_result_t sd_write_block_multi( sd_handle_t*, ... )
```

```
sd_result_t sd_erase_block( sd_handle_t*, ... )
```

```
sd_result_t sd_stop_transfer( sd_handle_t* )
```

Communication Interface:

**SPI**
